

GOLD STANDARD ENGINEERING RESUME REFACTORING

Candidate: Chad K. Bachoo

Portfolio URL: <https://github.com/CK-Bachoo/IF-Cyber-Portfolio>

Standard: World Elite Gold Framework Metric Alignment

1. Architected and deployed immutable cloud infrastructure configurations using HashiCorp Terraform (HCL), reducing AWS multi-tenant provisioning times from hours down to seconds while systematically eliminating manual configuration drift.
2. Engineered a zero-trust automated CI/CD deployment pipeline within GitHub Actions integrated with tfsec static application security testing (SAST) engines, shifting security left to block vulnerable perimeters from reaching live staging regions.
3. Conducted active forensic logging triage and continuous administrative log audits via Amazon Athena, executing analytical SQL query compilation strings to identify compromised credentials and neutralize lateral breach simulations.
